Y25 - 2026-2027 Trimester - 4

Project Abstract Submission Form

Sec No- 13	Team No- 01	Project Title- Event Management Mobile App for Attendee Self Service
------------	-------------	--

1. Abstract

Event management often requires attendees to depend on organizers or volunteers for basic tasks such as event registration, schedule checking, session selection, venue information, and receiving announcements. This can result in long queues, repeated queries, communication gaps, and difficulty in managing attendee information. The proposed project, EventEase, is a mobile application designed to provide a convenient self-service platform for event attendees. Users can create an account, browse available events, register for events, view event schedules, select or track sessions, access venue and speaker details, and receive important notifications. The system will maintain attendee, event, session, registration, venue, speaker, and notification data in a structured relational database. A backend REST API will handle authentication, business logic, registration processing, and communication between the mobile application and database. The database will use normalized tables, primary and foreign keys, constraints, queries, and suitable database operations to maintain data consistency and support efficient retrieval. The proposed system aims to reduce the manual workload for organizers while providing attendees with faster, more organized, and independent access to event services.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520090212	J Rakshitha	
2520090216	N Charishma	
2520090067	J Sahasra	

3. Frameworks / Platforms / Software Used

- Frontend/Mobile: Flutter
- Programming Language: Dart
- Backend: Node.js
- Backend Framework: Express.js
- Database: MongoDB
- API: REST API
- Development Tool: Visual Studio Code
- API Testing: Postman
- Version Control: Git & GitHub
